Re: Mason's Mill Water Wheel

Gentlemen:

The City of Roanoke would like to repair the water wheel and place it in operation as part of the Mason's Mill Park. The wheel is not operating at this time because it needs quite a bid of restoration work before it can be used.

Would you please examine the enclosed drawing and give us a quotation for the following work:

1. The City of Roanoke will lift the Mill wheel out of its present location and set it in the parking lot.
2. The rims of the wheel are in fair condition and requires little or no work. The wheel pan between the rims is also in fair shape but will need to be straightened out in a few places that have been pushed out of round by flood water debris.
3. Remove all of the present bucket metal and its supporting angles. Fabricate new buckets and angle supports of 22 gauge galvanized metal and install so wheel can be placed in operation, see enclosed drawing.

Be sure to visit the site and examine the wheel to determine for yourself the condition of the present wheel. If you feel additional work will be required to place the wheel in operating condition, please notify the Office of City Engineer so an addendum may be issued.

Please submit quotation to me not later than February 1, 1985.

Sincerely,

L. Bane Coburn
