

INSTALLATION OF EQUIPMENT

The Roanoke Water Co. will purchase under another contract the following items of equipment:

1. 25 MGD vertical turbine type pump and motor
2. Two 5 ft. diameter steel pots
3. Motor control unit

which will be delivered f.o.b. job site, Roanoke, Virginia.

This Contractor shall unload, haul, and erect all of the above equipment complete, in operating condition, in the locations as specified, or as shown on the plans. The Contractor shall base his proposal upon making a complete installation, including all necessary appurtenant equipment and material, excepting only such materials as will be furnished under the equipment contracts.

All equipment shall be installed as directed by the manufacturer.

Anchor bolts for equipment which will be purchased by the Water Department will be furnished by the equipment manufacturer for installation under this contract. It will be this Contractor's responsibility to cooperate with the Water Department in obtaining delivery of this material so that the setting of same can proceed with the concrete operations without causing delay in the work. The setting of these bolts in proper location for the respective items of equipment is included in this contract and this Contractor will be held responsible for properly locating same.

He shall construct all concrete foundations for all of the equipment to be furnished by him or the Water Department to the lines and dimensions as indicated on the drawings, or in accordance with more detailed drawings to be furnished later. Bidders shall include in their bids the cost of this concrete, the cost of the work of excavating and all necessary forms, and other miscellaneous costs.

For wiring and complete electrical installation, see Electrical specifications.

Care shall be exercised in the installation of all items
