Gentlemen:

We recently purchased one of your close coupled pump and motor, Type HD, 1", 5 HP, single phase, 60 cycle, 110-220 volt, 3450 RPM, Imp. Dia. 6-9/16", 40 gpm, 180' discharge head.

This pump is equipped with a Century Electric Company motor, Model CSM 225C7-JC5-1K, Spec. No. 8887, Serial No. 8AB47312. This is a capacitor motor and we are having considerable difficulty with capacitors burning out.

We would appreciate a wiring diagram of the motor, and your comments on our trouble.

Yours truly,

G. H. Ruston
Assistant Manager
